

Henry®

“Protect your roof against
deterioration with Henry
Protective Coating Systems.”

Prevent alligating from causing water damage to your roof.

Henry Protective Coating Systems

- Protect your roof and your building investment by preventing roof deterioration that can cause costly, premature failure.
- Versatile protective coatings—in emulsion and solvent-based formulas—can be used alone, in conjunction with polyester reinforcement, or with a reflective top coat.
- Provide sound, waterproof protection to almost any roof surface: existing asphalt, metal, composition, modified bitumen, or EPDM.

See reverse for system descriptions

protective coating systems

System Features

- Premium and versatile coatings for the protection of asphalt-based roofing materials and existing weathered roof surfaces.
- Water based formulations for environmentally friendly application.
- Solvent based formulations for low temperature applications.
- Seamless, smooth surface finish.

Benefits to You

- Protect your investment with a coating system that satisfies both the project budget and protects your long-term investment.
- Henry Protective Coatings can be applied over all types of asphalt based roofing systems—SBS and APP modified as well as standard built-up-roofing.
- Your Henry Maintenance Systems Contractor will perform the basic roof system repairs prior to applying a protective coating. The result is a maintenance system that will keep water out of your building, and at the same time, protect the field of the roof from the elements.
- Result is a smooth surface finish that is attractive and easily inspected, and can be readily resurfaced in the future.
