

FortiFlash® Butyl Joist Guard deck frame protection

Moisture protection that prolongs deck life

Your deck is only as good as the frame that supports it. **FortiFlash® Butyl Joist Guard** provides a layer of moisture protection on the tops of deck joists and beams, prolonging the life of the entire structure.

FortiFlash Butyl Joist Guard is a premium self-adhesive butyl flashing membrane designed for use on deck joists and beams. It is composed of a self-sealing butyl adhesive laminated to a durable UV resistant engineered film with a siliconized paper release sheet. Available in 2" tape for joists and 4" tape for beams.

To install, remove the paper release sheet and roll tape onto the top of joist or beam. Center the tape, wrap the edges slightly over sides of beam or joist, and apply pressure to adhere. Notch at intersections as needed to ensure edges of tape fully adhere.

Features and benefits

-  Superior water protection
-  Easy installation
-  Self-seals around screws and nails
-  Won't drip like asphalt tapes
-  Can be applied in cold temperatures
